

WetProtect® floors feature **water-tight joints** to keep water from leaking through, with a **waterproof finish** to trap liquid on the surface. Only WetProtect floors provide a **lifetime warranty protecting both the surface and the subfloor** against common household spills. Plus, new WetProtect Gold protection guarantees that the flooring will not be damaged by water absorption — even from leaks, overflows, and minor floods.

### **PerimeterSeal™ Tape**

To ensure maximum subfloor protection, PerimeterSeal™ tape covers the expansion gap with a water-tight seal that keeps liquid from seeping between the floor and the wall.

## SURFACE & SUBFLOOR PROTECTION

WetProtect® offers complete waterproof protection with water-tight joints and a waterproof finish backed by a lifetime surface and subfloor warranty. In addition, floors covered by a WetProtect Gold Floodproof Warranty are guaranteed not to be damaged by water absorption.

**UNICLIC**  
PATENTED TECHNOLOGY

### FLOORING WITH WETPROTECT

WetProtect and WetProtect Gold products have a waterproof finish and a water-tight locking system to prevent both surface and subfloor damage.

### OTHER WATERPROOF FLOORS

Ordinary wood floor surfaces are easily damaged by water. Even floors that claim to be waterproof may allow water to leak through the joints.

### WETPROTECT SUBFLOOR PROTECTION

Patented Uniclic® technology provides a water-tight joint to lock water on the surface and prevent mold and mildew damage on the subfloor.

### WITHOUT SUBFLOOR PROTECTION

When water leaks below the surface, it creates an environment for mold and mildew that can damage the subfloor and require expensive maintenance.
