

# Will It

# OTR Microwave

# Fit?

Buying a new OTR microwave is an exciting experience. We created this guide to help you collect the information you need to make choosing your new OTR Microwave as easy as possible. Please use this measurement guide to ensure your new appliance will fit in its space properly. A measurement off by as little as 1/4 inch can turn the excitement of your new purchase into a major inconvenience. Double-checking your measurements will help to ensure a smooth purchase and delivery. These measurements are **not required but are suggested** to ensure you select the right product.

**An appliance returned because it will not fit will cost you (the customer) a delivery fee and possibly a restocking fee. For questions or concerns about dimensions, please contact us at, 1-800-336-9136**

## Check Twice, Buy Once

There are areas of concern before selecting a new OTR Microwave

Measure from the floor to the top of your current OTR microwave as well as from the floor to the bottom of the current OTR microwave. Measure the height of the current OTR microwave.

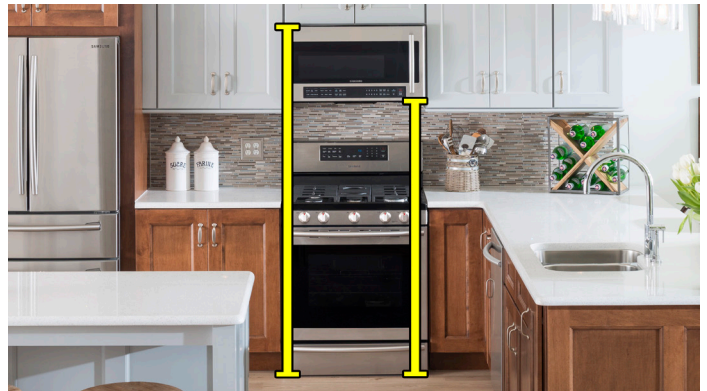

Floor to Top \_\_\_\_\_

Floor to Bottom \_\_\_\_\_

Height of OTR microwave \_\_\_\_\_

Measure the depth of your current OTR microwave. This will be used to compare to new models

Depth \_\_\_\_\_

All OTR microwaves are 30" wide. If you are replacing a vent hood is it 30" wide?

Yes  No

## Obstacles

There are a couple questions that may affect the style of OTR microwave that will work in your kitchen.

Does your backsplash area have custom tile or metal?

Yes  No

Please measure any bare wall between the top of your custom backsplash and your current OTR\vent hood.

Bare wall \_\_\_\_\_

Do you have a 110v power source? This should be no problem if you currently have or had a working OTR or vent hood.

Yes  No

Ventilation comes in two forms. Most systems will vent the air out of the house through ducting. Others will pull the air through filters and recirculate it back into the room. All OTR microwaves can be adjusted to conform to the system in your home. If you are paying for our installation, we will connect your new OTR to either system. NFM installers cannot create a new out of the house ducting system.

Is a breaker switch available to turn the power off?

Yes  No

## The Fun Part!

Selecting your new OTR microwave

A new OTR microwave will provide years of enjoyment. Most new models are faster, bigger and have more features. Color choices include stainless steel, white, and black. We provide live demonstrations for our displayed models. Come in and see us to help you narrow it down, that's why we are here!
